PROFESSIONAL SUMMARY

BCA graduate with Data Science training from ExcelR, Pune. Looking for a Data Science Intern, Data Analyst Fresher or Machine Learning Intern role. I use Python, Pandas, statistics and Scikit-learn to clean data, find patterns and build classification models. I built an end-to-end bankruptcy prediction project and turned it into a working Streamlit app.

TECHNICAL SKILLS

Programming: Python

Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), Data Cleaning

Data Visualization: Matplotlib, Seaborn

Statistics: Mean, Median, Mode, Range, Variance, Standard Deviation, Percentile, Quartile, IQR, Five Number Summary, Frequency Distribution, Outliers, Skewness, Kurtosis, Covariance, Correlation

Probability and Inference: Probability, Probability Distributions, Normal Distribution, Z-Score, Central Limit Theorem, Sampling, Confidence Interval, Hypothesis Testing, Z-Test, T-Test

Machine Learning: Scikit-learn, Classification, Logistic Regression, Decision Tree, Random Forest, KNN, SVM, Ridge and Lasso Regression, K-Means Clustering, PCA

Ensemble Learning: Bagging, Boosting, AdaBoost, XGBoost, LightGBM

Model Evaluation: Train-Test Split, Cross-Validation, GridSearchCV (Hyperparameter Tuning), Confusion Matrix, Classification Report, ROC-AUC, Feature Importance

Tools: Jupyter Notebook, Streamlit, Joblib, GitHub

PROJECTS

Bankruptcy Prevention: Corporate Bankruptcy Prediction and Risk Analysis

Tools: Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Streamlit, Joblib

GitHub: github.com/shivanshsingh444111-eng/Bankruptcy-Prevention

- Analysed data of 250 companies rated on six risk factors (industrial risk, management risk, financial flexibility, credibility, competitiveness and operating risk) to predict bankruptcy.
- Performed EDA to check missing values, duplicates, outliers and class balance (107 bankruptcy, 143 non-bankruptcy) using crosstabs and a correlation heatmap.
- Found that financial flexibility, competitiveness and credibility are the strongest indicators of bankruptcy.
- Trained and compared Logistic Regression, Decision Tree, Random Forest and KNN using a stratified 80/20 train-test split, confusion matrix, classification report and ROC-AUC.
- Selected Logistic Regression because it is easy to interpret and gives prediction probabilities, then saved the model with Joblib.
- Built a Streamlit app where users rate the six risk factors and get a prediction, a confidence score and the factors that raise or lower risk.

TRAINING

Data Science Training, ExcelR, Pune

- Covered Python, statistics, EDA, machine learning and model tuning.

EDUCATION

Bachelor of Computer Applications (BCA)

Rajarshi School of Management and Technology, Varanasi

Affiliated to Mahatma Gandhi Kashi Vidyapith, Varanasi | CGPA: 6.66

Class 10th and Class 12th: Aditya Narayan Government Inter College, Chakiya
